

SEA4 VALUE

Mining value from brines

NOVEL TECHNOLOGIES IN SEAWATER DESALINATION PLANTS TO EXTRACT MINERALS AND METALS FROM SEAWATER BRINES

Sea4value will design and implement technologies for recovering minerals and metals from seawater desalination brines. The aim is to make desalination plants the third source of valuable raw materials in the European Union. More specifically, a multimineral and modular process will be developed, which will be the first industrially viable brine mining method.

APPLYING A CIRCULAR SUPPLY MODEL

Seawater brines as a resource of raw materials recovery
