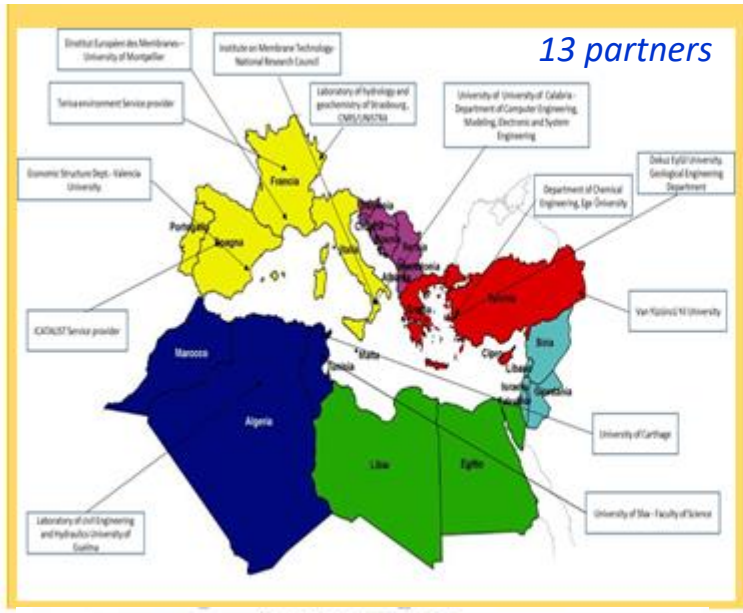
# PRIMA PROJECT: Management of industrial Treated wastewater ReUse as mitigation measures to water Scarcity in climaTe change context in two Mediterranean regions "TRUST"

## The overall objective of TRUST project is to contribute to reducing the water scarcity in Mediterranean regions where the risk is increased by a combined effect of water resources overuse and climate change

**Objectives**

- Provide novel, environmental and economic sustainable wastewater treatment solutions for challenging industrial wastewaters, applying a circular economy approach and in a synergic collaboration between technology providers, economists and LCA expert.
- Propose optimal management strategies based on reuse of water at multiple allocations levels, in partnership with water utilities, industries, local and regional water authorities including policymakers.
- Present concrete scenarios highlighting the impact of water reuse and thus water resource saving in the light of climate change, taking into account the regional constraints identified by hydrologists and hydrogeologists.
- Identify business models based on a regional approach in order to contribute in sustainable resources management and sustainable business operations through saving of fresh water, reducing operating expenses and developing regional-scale facilities.
- Two regions will be targeted in this study: Turkey (Textile industry) and Tunisia (Pharmaceutical industry).



**PRIMA CALL 2020 SECTION 1 - Management of Water, Topic 1.1.1-2020**
**Type of Action: Innovation Action (IA)**
**Acronym: TRUST**
**Duration: 36 months - Start Date: 2021-01-06**
**Project Costs: € 1.985.000,00**
**Project Coordinator UNIVERSITY of CALABRIA – UNICAL**

UNIVERSITÀ DELLA CALABRIA

**UNICAL TEAM: Prof. Vincenza Calabrò (Scientific Responsible) - DIMES**
**Prof. Stefano Curcio; Dr. Sudip Chakraborty.**

This project has received funding from PRIMA Foundation under grant agreement *number: 2024 .*
