uBlueTec

Training framework on Underwater Tec as key enabler for blue careers development

uBlueTec aims to set up, test and validate a triple transition training and skills development model (green, blue, digital skills) based on a participatory approach with durable partnerships among universities, VET providers, clusters and SMEs; all active members of blue economy value networks; and all valuable links in the foreseen value-chain of the uBlueTec skills-development model.

Project goals:

- Development of educational material and curriculum, linked to microcredentials, and enabling skills-building in state-of-the art UW technologies from a green/digital perspective.
- Establishment of a Hub on UW Tec, as a permanent capacity-building structure nurturing the long-lasting collaboration of the involved stakeholders.
- Deployment of recruitment platform for blue jobs offering online courses and facilitating demand-supply matching between current/future labour force and industries, while intelligently identifying and publishing the skills-gap at regional-national-EU levels.
- Piloting the developed assets at HE & VET levels.
- Attraction of young talents in terms of Career Days and Entrepreneurial Bootcamps.
